### **DETAILED ACTION**

This action is in response to applicant's response filed on 1/12/09. Claims 30-33, 44-59 are now pending in the present application.

#### ***Double Patenting***

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 2618

2. Claims 30-33, 44-59 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-15 of U.S. Patent No. **7,349,675**, hereafter '675, in view of US **7,349,691**, hereafter '691.

'675 teaches an encoding method for a transmitter which extracts data packets into a first portion of encoded data streams for transmission at a first latency and a second portion of encoded data streams for transmission at a second latency, wherein the second latency is lower than the first latency; and interleaving said first and second portions over a broadcast frame that includes sub frames, wherein each sub frame includes data associated with the first portion and data associated with the second portion that are interleaved together, and wherein each of the extracted data packets that are associated with the first portion is interleaved across multiple subframes (see claims 1-15), this would include all the claimed limitations except for localcast transmitter and mobile device. However, '691 teaches claimed localcast transmitter and mobile device (see claims 1, 22). Therefore, it would have been obvious to one skilled in the art to incorporate the encoding method in '675 to transmitters of localcast transmitter and/or mobile devices in '691 as well, so that fast packets can be effectively transmitted with slow packets in a data frame.
